# Gear Pumps

Spare parts & Service

Besides spare parts for our own WITTE gear pumps which are stocked locally in Europe, USA and China we also offer service for other gear pump brands.

WITTE parts fit into many pumps of other brands from sizes 22/6 to 280/280. Call us for a quote or set up an on-site inspection with our local representatives. If you need your gear pump to be overhauled or repaired send it to WITTE.

We will disassemble the pump, evaluate the extent of work needed and quote an attractive price for the parts and time required. Benefit from our quality, our experience, our knowledge about axial, radial and tip clearances, our trained personnel and our suggestions to improve the performance of your gear pump.

We could check if with our Herringbone (double helical) geared shafts the flow rate of your pump can be increased to debottle-neck your application – in certain cases the WITTE herringbone shafts can increase flow rate in excess of 15%!

Our two Pocket Bearing design significantly increases shaft life. These pockets are mirror finished to improve product lubrication of the bearings and the shaft journal surfaces.

All parts or work are covered by our 12-months guarantee.\*
